

4. About GPU support

GPU is currently supported by the following tools in BV Workbench:

- FIR filter
- Frequency analysis
- Phase analysis
- E-Field demodulation

Requirements:

NVIDIA GPU with compute capability 3.5 or higher (Geforce 7xx and later)

All GPU calculations are done in single precision (32-bit) floating point, while computation in CPU mostly use double precision (64 bit). A minor difference may occur due to rounding error.
